Colpatch

Re-branded MACFIX® Cold Asphalt

Colpatch is a cold applied, long lasting, deferred set storage grade macadam - ideal for instant, high quality repairs to bituminous or concrete surfaces. Available in 6mm grade, Colpatch can be used for carriageway and footway repairs, patching, reinstatements and temporary surfacing. Colpatch provides an immediate solution to potholes in roads, drives, car parks and many other surfaces. The formulation contains a combination of penetration grade bitumen's, additives and selected aggregates.

Colpatch is cold applied and safe to handle. No mixing is required. Workability can be ensured, even in cold weather, by simply manipulating the material either in its sealed 25kg bag or, if it is in one tonne bags/bulk, by turning it over with a shovel. In storage Colpatch has the advantage of lasting up to 2 years without special storage requirements and there is minimal product wastage. The material cures by a combination of air drying and compaction.

Colpatch is available in 25kg sealed bags. It can also be supplied pre-packed on pallets (40 x 25kg), in 1 tonne bulk bags, or in bulk open loads.
