

NEWS: NORTHERN CYPRUS

MACFIX® Cold Asphalt Trials started in December 2007

Surrey Developments is a company registered in the Turkish Northern Territory of Cyprus.

Macismo International Limited despatched a field technician in December 2007 to assist in the first production runs of MACFIX® Cold Asphalt that took place in the Town of Girne alongside Eurotek's technical personnel.

The end product is currently being trialled and it's expected that the product will provide long term repair solutions without the need to ship alternative temporary repair products from mainland based suppliers.

The fact that the Cold Asphalt can be stored for long periods of time in bulk open stockpiles without going hard until installed into Pot Holes etc means that the Islands Highway authorities can order larger more economical quantities with confidence in the knowledge that the product will not go to waste.
